## Press Release Brigitte & Kuhlmann Küchen House Exhibition 2026

### PERFECTLY ALIGNED

Design. Function. System. Precision in perfect harmony.

Under the guiding principle "perfectly aligned", Brigitte and Kuhlmann Kitchens jointly invite visitors to their house exhibition. Two established brands, one shared philosophy: design, function and system expertise come together to form a harmonious whole. At the heart of the concept are kitchens that combine aesthetics with everyday functionality and are thoughtfully designed down to the very last detail.

#### **Combining strengths. Preserving identity.**

As part of the further development of their brand strategy, Brigitte and Kuhlmann Kitchens are moving closer together. Shared standards, innovations and new products provide a solid foundation. A clearly defined core range brings together expertise, leverages synergies and strengthens the common strategic direction. At the same time, both brands consciously retain their individual character and distinct identities. In this way, the new strategic direction combines proven strengths with new opportunities and creates the best conditions for the future.

#### **Refined design meets precise function.**

With ARTEABOX, the new box system from Blum is introduced, combining refined design with precise motion technology and high functionality. With its slim 12.8 mm drawer side, ARTEABOX underlines the clear design language of contemporary kitchens and creates a precise, harmonious joint pattern. Thoughtful details, high stability and a load capacity of up to 50 kg ensure reliable comfort in everyday use. ARTEABOX thus combines understated aesthetics with intelligent functionality.

#### **Maximum storage, consistently handleless.**

With NEXA, the carcass range is expanded with a fully handleless solution. The 84.5 cm-high MAXX carcass combines additional storage space with an ergonomic working height. The integrated handle profile creates a clear, minimalist appearance and reinforces the continuous flow of the design. NEXA combines function and comfort with a contemporary, architectural aesthetic.

#### **Wood decors now available in two grain directions.**

For the Delta and Como ranges, all wood decors are now available with both vertical and horizontal grain direction. This creates additional freedom in design and enables even more individual kitchen planning.

#### **All in Black: a flawless look in deep black.**

The Sense range is expanded with the new Dark Black finish. The colour-stable, light-resistant and hardened surface is combined with an innovative anti-fingerprint finish. The result is a highly durable front with a flawless appearance and pleasant tactile quality – consistently rendered in deep black.

### **Surfaces that make design tangible.**

The Oxford range expands the collection with three expressive surface options that combine distinctive material character with a tactile quality that can be experienced immediately.

#### **Wood effect with synchronized grain**

Synchronized grain and texture create a natural sense of depth. Alternatively, a linear ribbed structure adds a distinctive accent. Both versions are durable and easy to maintain.

#### **Metal effect with depth**

The deeply structured surface with a metallic shimmer interacts with light and texture, giving the front an elegant and distinctive character.

#### **Mineral surfaces**

The finely textured, matt surface is reminiscent of hand-applied fine plaster and combines an urban aesthetic with a natural tactile quality, durability and easy care.

### **Amber: warm accents with Mediterranean flair.**

Amber, an expressive new colour, expands the COLOUR CONCEPT. As a structured velvet lacquer, Amber brings a warm, vibrant atmosphere and Mediterranean flair to the kitchen. In addition to numerous base colours, the Colour Concept offers the full range of RAL and NCS colours, opening up an exceptional degree of creative freedom – from understated and harmonious to bold and expressive.

### **Worktops become a statement of design.**

With numerous new decors, including four laminate variants, Brigitte and Kuhlmann are expanding their worktop collection. This creates a wide range of combination possibilities with the latest front designs. Whether travertine, stone and granite interpretations or a striking marble look – the worktop evolves from a purely functional component into a defining design element.

All laminate decors are now available in thicknesses of 17, 25, 40 and 80 mm. They combine authentic decor reproductions with durable, hygienic and easy-care surfaces.

New compact worktops in a 12 mm thickness further expand the range. All seven decors in this version are 100% waterproof, particularly scratch-resistant and easy to clean. The range therefore extends from a refined Slimline look to a striking 80 mm worktop or counter surface.

### **Kuhlmann Selection: Selected for the exceptional.**

With KUHLMANN SELECTION, Kuhlmann expands its core range with an exclusive collection for sophisticated kitchen concepts. Unique solutions such as 11° cabinets, MULTILEVEL, MULTICORNER and TA'OR combine exceptional design with intelligent functionality.

New additions include shelves and shelves with front finishes, which integrate harmoniously into the kitchen as continuous design elements. The new Wallis range also adds three elegant veneer designs to the front collection, each available with vertical and horizontal grain direction. The natural individuality of veneer gives kitchens a warm and distinctive character.

### **Perfectly aligned.**

What Brigitte and Kuhlmann share goes beyond being under one roof: it is the ambition to bring different strengths together to create a convincing whole. "perfectly aligned" represents a shared approach in which design, function and system are consistently coordinated.

The result is kitchens that impress through clear design, intelligent solutions and consistent quality – each with its own distinctive character, yet united by a shared perspective.
